

A 10x10 heatmap visualization. The color scale ranges from dark purple (low values) to bright yellow (high values). The highest values are concentrated in a central cluster, with the peak value (bright yellow) located at the intersection of the 5th row and 5th column. The values decrease as they move away from this center, transitioning through light green and teal to dark purple at the edges of the grid. The pattern is roughly circular, with some minor variations in intensity across the grid cells.
