

A 10x10 heatmap visualization. The color scale ranges from dark purple (low values) to bright yellow (high values). The highest values are concentrated in a central cluster, with the peak value (bright yellow) located at row 4, column 5. The values decrease as they move away from this central peak, transitioning through green and blue to dark purple at the edges. The overall shape of the high-value region is roughly circular, centered in the grid.
